

# Mostafa Amine Ahmed Emam

Front-End Developer | React.js & TypeScript

elsonnymostafa231@gmail.com | 01117024184 | Giza, Egypt | [github.com/mostafaelsonny](https://github.com/mostafaelsonny) | [sonny-portfolio-dev.vercel.app](https://sonny-portfolio-dev.vercel.app) | [linkedin.com/in/mostafa-elsonny](https://linkedin.com/in/mostafa-elsonny)

## SUMMARY

---

Front-End Developer with hands-on experience building and shipping full-stack web applications. Comfortable working across the stack — React with TypeScript on the frontend, Node.js/Express REST APIs, real-time systems with Socket.IO, and cloud backends with Firebase and Supabase. Experienced in role-based authentication, third-party API integration (AI, payments), and delivering complete product features from requirements to deployment.

## TECHNICAL SKILLS

---

**Languages:** TypeScript, JavaScript (ES6+), HTML5, CSS3

**React Ecosystem:** React 18/19, React Hooks, React Router v7, Redux Toolkit, TanStack Query v5, Zustand, Context API

**Forms & Validation:** React Hook Form, Zod schema validation

**Styling:** Tailwind CSS, CSS Modules, CSS Custom Properties, Responsive Design, Mobile-First

**Backend & APIs:** Node.js, Express.js, REST API design, Socket.IO, JWT authentication, Role-Based Access Control (RBAC)

**Databases & BaaS:** MongoDB, Mongoose, Firebase (Firestore, Auth, Storage), Supabase (PostgreSQL, Auth, Edge Functions)

**Payments & AI:** Stripe Checkout, Google Gemini Vision API

**Tooling:** Git, GitHub, Vite, Vercel, Render, Figma, ESLint, Cursor, Claude Code, Windsurf, Figma MCP, V0; comfortable using AI for code review, MCP server integration, and test generation

**Testing:** Vitest, React Testing Library (in progress)

**Process:** Agile/Scrum, Jira, BRD/PRD, sprint planning, QA collaboration, Figma-to-code handoff, clean code principles, feature-based folder structure

## EXPERIENCE

---

**Front-End Developer** — React Client Projects Jan 2026 – Present

- **Full product delivery:** Built and deployed React applications for Egyptian clients — a multi-branch car showroom and a fitness platform — handling UI development, API integration, and Vercel deployment.
- **Performance optimization:** Raised Lighthouse Performance from 40 to 95+ by migrating all images to Cloudinary CDN with lazy loading and WebP conversion.
- **Custom React hooks:** Built reusable hooks for localStorage persistence, scroll-triggered animations, and shared UI state — reused across multiple projects.
- **Version control:** Maintained organized GitHub repositories with consistent branching, commit structure, and project documentation across all deliverables.

## TRAINING & CERTIFICATIONS

---

**Frontend Engineering Bootcamp** — Digitera × icareer × EraaSoft 2026

- Completed a structured, team-based engineering program covering the full software delivery lifecycle: BRD → PRD → backlog → development → QA → deployment.
- Worked within Agile/Scrum methodology — sprint planning, daily standups, Jira ticket management, and collaborative feature delivery.
- Practiced AI-assisted development workflows using Cursor and Figma MCP for design-to-code implementation.
- Certificate: [lnkd.in/p/e4bcjgRX](https://lnkd.in/p/e4bcjgRX)

## EDUCATION

---

**B.Sc. Computer Science** — Helwan University — Cairo, Egypt

Oct 2024 – Present

- Relevant coursework: Data Structures, Algorithms, Object-Oriented Programming, Networking

## PROJECTS

---

**PharmaCode — AI Healthcare Platform**

Jun 2026 – Sep 2026

<https://mediscout-frontend.vercel.app/>

*Stack: React 19, TypeScript, Node.js, Express 5, MongoDB, Socket.IO, Google Gemini Vision, Stripe, Redux Toolkit, TanStack Query, React Hook Form, Zod, Tailwind CSS v4*

- **AI prescription processing:** Integrated Google Gemini Vision API to extract drug names, dosages, and quantities from uploaded prescription images, returning structured JSON validated against a Mongoose schema before saving.
- **Real-time multi-role system:** Built a Socket.IO architecture with 4 user roles (patient, pharmacist, delivery, admin) — role-aware rooms ensure each actor receives only their relevant events without polling.
- **Role-based access control:** Implemented JWT authentication with an `authorize()` middleware on every Express route, and `ProtectedRoute` components on the frontend — a delivery rep cannot access a pharmacist endpoint at either layer.
- **Stripe payment flow:** Integrated Stripe Checkout with purchase eligibility logic — only pharmacist-approved drugs with confirmed availability reach the payment session.
- **State management:** Used Redux Toolkit for cross-component event-driven state (auth, Socket events) and TanStack Query v5 for server state with cache invalidation and background refetch.
- **Forms & validation:** Built all user-facing forms with React Hook Form and Zod schema validation for consistent client-side error handling across all 4 role dashboards.

**Sonny Store — E-Commerce Platform**

Apr 2026 – Jun 2026

<https://sonny-store-iota.vercel.app/>

*Stack: React 19, TypeScript, Supabase (PostgreSQL + Auth + Edge Functions), Stripe, React Hook Form, Zod, Framer Motion, Tailwind CSS v4*

- **Serverless payment flow:** Built a Stripe Checkout integration using Supabase Deno Edge Functions — the secret key never touches the client, the order record is created before the session, and status is confirmed via webhook.
- **Authentication & protected routes:** Implemented Supabase Auth with role-based route guards (user/admin) and Row Level Security policies so users can only read and write their own orders.
- **Admin dashboard:** Built a protected admin panel for managing product catalog, updating order statuses, and monitoring KPIs — all driven by real Supabase queries.
- **Forms & validation:** Implemented checkout and auth forms with React Hook Form and Zod, handling async submission states, field errors, and edge cases like duplicate email on register.
- **Responsive UI:** Built mobile-first layouts with Tailwind CSS v4 and Framer Motion page transitions, tested across Chrome, Firefox, and Safari on mobile and desktop viewports.
